

Patient Record Sharing

How many times have you had to list your allergies, medications and medical history? Would it be great if all of your doctors had instant and secure access to your medical information? No more carrying health records back and forth. No more recalling your last lab results or what medications were prescribed.

Hawthorn Medical is pleased to announce our participation in Patient Record Sharing through the Commonwell and CareQuality platforms, allowing your participating health care practitioners access to your health information nationwide, regardless of where care occurs.

HOW DOES PATIENT RECORD SHARING HELP YOU?

- ❑ **Helps your doctors share information** - Allows your different primary care providers, specialists, hospitals and more to have near instant access to your important health information. This includes health facilities you may visit near home as well as while you are traveling in the United States.
- ❑ **Gets you faster and better care** - With less time wasted on tracking down your test results and other health information, your health care providers can spend less time on paperwork and more time on your care.
- ❑ **Supports you in case of emergency** - There may be a time when you do not have the ability to gather or share your health information. Medical staff could immediately pull your allergies, medications and health problems, helping them care for you without delay.
- ❑ **Reduces paperwork and hassle** - Save time, money and the hassle of obtaining copies of your medical records.
